WASSLZ

With over 1000 applications of LPG, there are currently hundreds of millions LPG users.

Whether for farming or welding cars, it is the world's most versatile energy source and many industries depend on it.

LPG even powers the Olympic torch.

Therefore, effectively monitoring LPG levels is integral for any sector's inventory and supply management and for having valuable diagnostic information.

MOVE INTO THE FUTURE

The outdated manual readings and traditional on-site processes leave both providers and users with little to no data imperative for preventative measures.

Scheduling operations and deliveries based on only estimates can lead to stockouts, leakages, lower customer satisfaction and eventually many unnecessary expenses.

*With delivery costs being the largest controllable expense, **investing in a modern solution** that enables effective supply chain management is **the next logical step** towards an **enhanced experience while reducing costs.***

MAKE THE SWITCH

Our state of the art smart solution allows remote monitoring of LPG tanks at all times and provides the precise data needed for optimizing activities, **improving efficiency and facilitating management.**

WHY CHOOSE WASSLZ

Our solution for smart LPG tanks is our own custom design, with technology developed completely in-house by industry experts who understand the pains of LPG providers. The smart solution is fast to implement, just simply install the sensor onto the LPG tank gauge dial and instantly measure the tank's levels.

WASSLZ

SMART TANKS, SMART RESULTS

Up to date software and analytics that give insights and total control over activities. It includes customizable reports, historical data analysis and API integration to enterprise management software.

Better customer experience and higher satisfaction that lead to more customer retention and engagement.

Security alerts that indicate LPG levels at certain, chosen, thresholds and greeter safety through leak and anomaly detection.

Improved maintenance efficiency and comprehensive 24/7 monitoring, reducing human error.

Higher, and fast, return on investment by delivering more volumes with less trips and efficient allocation of resources.

IN 3 STEPS ONLY

- 1 Plug the device onto the remote-ready dial.
- 2 Cellular network sends collected data to WASSLZ cloud servers.
- 3 Log on web app, www.wasslz.io to view data.

INDUSTRIES WE TRANSFORM

Our smart LPG tank technology can be applied in many sectors such as:

Agriculture & livestock farming

Aviation & travel

Medical & hospitals

Hospitality & restaurants
